GUEST LECTURE

SYSTEMS RESEARCH: A GRADUATE STUDENT PERSPECTIVE

by **Mr. NODIR KODIROV**

A fifth year PhD student at University of British Columbia (UBC), Canada (cs.ubc.ca/~knodir). He is broadly interested in Systems, with a particular focus on networked systems within the data center.

Thurs
4
OCT

Time: **18:00-19:00**
Venue: **Room A 202**
Language: **English**

DESCRIPTION:

This talk summarizes state-of-the-art in Systems research and discusses some of the open problems. We split Systems research broadly into Compute, Storage, and Networking subfields, and focus on recent advances in each. We overview influential academic papers which significantly impacted the field, transformed the industry, and ultimately changed the way people conduct a business. The lecture will also cover some of the open problems in Systems and how their solution could potentially enable whole new applications.
